Section	Waste Water	Date	August 5, 1987	Procedure #	WW-11
Subject	Reuse of Package Sewage Treatment Plants			Page	1 of 1

Used package sewage treatment plans often become available to developers for use at a new location. The capacity, however, is rarely equal to the proposed design loading. In such cases, a plant, if well maintained and in proper operating condition, will be considered acceptable to this Office if it is oversized by 20% or less based on calculations of the proposed design loading. No undersized plants will be considered acceptable.
